☑ Report Validator

Spend less time reviewing reports in CaseWare with an automatic validation dashboard

Do you ever worry that something was missed during your last statement review? Perhaps they were out of balance, or that last-minute amendment introduced an error into your reports?

The review process is arduous! Performing hundreds, if not thousands of checks to ensure everything is correct so that you can have confidence in the data is time-consuming and stressful. Save the time and eliminate the stress, perform hundreds of diagnostics with the click of a mouse.

Eliminate one of the finance departments' most time-consuming and stress-inducing tasks.

Step 1:
Document your statement tests.

Step 2:
Upload those tests into the validation system.

Step 3:
Push Validate

5 Reasons to stop reviewing and start validating:

1 Time
How many hours do you spend checking and rechecking your reports? We'll save you about 90% of that time.

2 Peace of mind
Before you submit your statements, review the dashboard. It only takes a minute and you can confirm all of your tests have passed. How's that for peace of mind?

3 Limitless tests
How many checks do you perform before submitting your statements? Dozens? Hundreds? Thousands? Run as many custom checks as you can think of in moments. Thought of a new one? Easily add it in seconds.

4 Fast & Easy setup
We'll have your automated review process up and running in no time. Once it's set up, you'll save hours every time you publish.

5 Cross-document validation
Run diagnostics across multiple documents, automatically compare balances between your Statements, MD&A, & footnotes instantly.
